

BeltGauge

Keeping an eye on your conveyor belt life.

BeltGauge

BeltGauge is our belt wear and forecasting solution.

Highly precise sensors continuously measure the belt, predicting the remaining life and identifying atypical wear events allowing you to rectify the issue and elongate the life of your belt.

MATERIALS	<input checked="" type="checkbox"/> Coal	<input checked="" type="checkbox"/> Iron Ore	<input type="checkbox"/> Quarry	<input checked="" type="checkbox"/> Hard Rock	<input type="checkbox"/> Grain

Features

- Connects to Fenner Dunlop's DigitalHub cloud solution
- Profiles belt thickness for full length and width
- Forecasts life and manages the replacement process
- Autonomously evaluates data against thresholds
- Notifies users by SMS and email when there is an issue
- Works on any conveyor belt - ply, solid woven, steel cord
- Fixed or mobile setups, up to 3200mm wide belt
- Auto-cleaning options to improve maintainability

Benefits

- Elongate belt life by being called to action, enabling issues to be addressed as they occur
- An all-encompassing solution allowing users to log in and manage belt performance in real-time from anywhere, anytime
- Flexible engineered design allowing quick installation and greater reliability and maintainability
- A single source of accuracy, improving team collaboration and analysis

Peace of mind

- Backed by Fenner Dunlop warranty and reputation
- Supported by our highly qualified team of diagnostics specialists, and conveyor experts
- Reliable after-sales support from our national network of service centre

Designed for you

- Locally engineered and manufactured in Australia
- Access to local diagnostic specialists and teams
- Combine BeltGauge with other iBelt products for a more comprehensive solution
